REMARKS

This is UNEVALUATED Information

On 4 June 1955, it was observed from a distance that concreting work was being done on a strip of about 400 meters on one half of the runway at Wolfsbehringen airfield. A concrete mixing machine was in operation. Observation at the field was considerably hampered because of road blocks on Highway No 4 and because control rides were continuously made by VP men. During talks it was learned that about 500 men were employed at the construction site. A local resident from Haina stated that two fuel dumps were allegedly located in Kindelwald south of triangulation point 355.5. 25X1

Comment. No detailed information is available on the present status of construction at Wolfsbehringen airfield. According to the last report of March 1955, concreting work had not yet been started since the frost period. The correctness of the information in the present report in regard to concreting work cannot be verified because the observations were made from a distance. The information on the location of the fuel dumps near triangulation point 355.5 also required confirmation since the reported distance from the field appears too far.
